## **DESCRIPTION**

This course will present all the basic definitions, and overarching concepts and principles in perinatal pharmacoepidemiology. This will be given as a formal lecture with time for questions at the end.

## **LEARNING OBJECTIVES**

- Define all basic terminology used in perinatal pharmacoepidemiology, i.e., gestational age, prematurity, low birth weight, gestational diabetes and hypertension, pre-eclampsia and eclampsia, Apgar score, malformations, etc.
- Definition and importance of organogenesis
- Medication exposure time-windows of interest for important adverse pregnancy outcomes

## **PRESENTED BY**

***Dr. Anick Bérard***

Full Professor, University of Montreal
